## Iowa NG9-1-1 GIS Standards Webinar Questions and Answers

| Question                                  | Answer  |
|---|---|
| Can we receive a copy of the webinar      | Yes, we can distribute the webinar to those who request it. It              |
| presentation                              | will also be provided to the Iowa project team and will be                  |
|   | posted to their website.  |
|   | A recording of the webinar will be available on the State's website.        |
| Who is responsible for bringing this data | The PSAPs, or their designated vendor, are responsible for                  |
| up your standards?                        | bringing the data up to the standards developed.                            |
| Will the standards you will be drafting   | The standards will lean strongly towards the draft NENA NG9-1-              |
| match any local national standards?       | 1 GIS data model as well as other state standards that are being developed. |
| We are already using GeoComm for GIS      | There will be information communicated to existing GeoComm                  |
| services. I recently submitted all of my  | customers in the future as to how the statewide NG9-1-1                     |
| MSAG and other info for a quote for       | standards will be incorporated into existing maintenance                    |
| maintenance. What will change on that     | agreements.   |
| end?                                      |   |
| About a year or so ago, we had our Road   | This is a new initiative. The request for data was for an ISICB 9-          |
| Centerline file assessed by Geocomm. Is   | 1-1 Feasibility Study that concluded in February 2012.                      |
| this the same program that was taking off |   |
| last year or is this a new initiative?    |   |
| GeoComm is my current E911 map            | We will contact you to acknowledge the data we will use for                 |
| vendor, does this mean I will not need to | the assessment.   |
| be contacted to provide my county's GIS   |   |
| data?                                     |   |
| How many different sources of GIS data    | There are 99 counties. There are also regions that will be                  |
| are there?                                | included in this study. We will work with those regions to                  |
|   | ensure we have the most accurate information for the                        |
|   | assessments.  |
| Will there be a pre-assessment or any     | The pre-assessment is what is happening in this phase.                      |
| plan for one?                             |   |
| Would a reduction of the number of        | It depends on what GIS data is flowing into those PSAPs. If                 |
| PSAPs improve or hinder process?          | several counties have different GIS data sources consolidating              |
|   | into one, then we would have a different GIS data source.                   |
|   | For the purposes of this project, PSAP consolidation doesn't                |
|   | play an immediate role unless it is happening in the next month             |
|   | or so and then the source of the GIS data would change.                     |

| Question                                  | Answer  |
|---|---|
| How about the ability to be able to       | This becomes a function of the system itself. There is not        |
| location within buildings or high         | anything built into the GIS standards or layers to accommodate    |
| density/multistory complexes              | density/multistory complexes.                                     |
| How will you handle the discrepancies     | That will be part of the next phase. Right now, the project       |
| between counties?                         | includes looking at the overall counties themselves. The next     |
|   | phase will be the remediation of the overlaps or issues           |
|   | between counties.   |
| What about cities?                        | We are working with the counties as a starting point. If your     |
|   | city has its own its own GIS data department, we would like to    |
|   | know how/if the data is passed to the county. Please feel free    |
|   | to reach out to us to explain that. We will work with you in      |
|   | regards to gathering that data.                                   |
| Is there a federal deadline for Next      | There is not an overall federal mandate currently as to when      |
| Generation 9-1-1 system                   | PSAPS will be required to be NG9-1-1 compliant.                   |
| implementation?                           |   |
| Texting this year to the PSAPs?           | The State will be requesting text to 911 for the PSAPS once the   |
|   | PSAPs have their equipment upgraded and the State has             |
|   | everything in place on the network side for those texts to be     |
|   | delivered across the ESInet. Once the request is made to the      |
|   | carriers, they have six months to begin providing text to 911 to  |
|   | those PSAPs.  |
| How will NG9-1-1 co-exist with the        | There is not a lot of information out on FirstNet. The            |
| FirstNet broadband system, or will it?    | Department of Public Safety is closely watching those efforts.    |
|   | The HSEMD 911 Program Manager is working closely with the         |
|   | FirstNet initiative to ensure NG911 will be able to co-exist with |
|   | the FirstNet broadband system.                                    |
| What happens when Iowa is NG9-1-1 and     | Call transfers are dependent upon the network in place in the     |
| the surrounding states are not there yet? | states and the network bridges set up between those states.       |
| Can call transfers happen between         | The preparatory work done with GIS data is also important step    |
| states?                                   | in getting to the goal of state-to-state or even across country   |
|   | standards. It relies on the each state to have the capability to  |
|   | send and receive on these networks.                               |
| Now when a new street is built I add to   | It is handled when the street is added into the GIS, and it is    |
| the MSAG – how is this done with NG9-1-   | coalesced, gone through Quality Assurance/Quality Control         |
| 1 in GIS?                                 | process and uploaded into the statewide system. While there       |
|   | are still legacy systems being used, maintaining the MSAG is      |
| Where can I got a same of the NCO 4.4 CCC | still going to be key.  |
| Where can I get a copy of the NG9-1-1 GIS | The Iowa Statewide NG9-1-1 GIS Standards will be made             |
| Standards?                                | available on the Iowa HSEMD E9-1-1 website at                     |

| Question                                    | Answer   |
|---|--|
|   | http://www.homelandsecurity.iowa.gov/programs/E_911.html.            |
|   | There is a NG911GIS tab at the bottom of that page. It will be       |
|   | emailed to all lowa wireless 9-1-1 contacts and lowa GIS             |
|   | Listserve.   |
| Will the PDF copy of the NG9-1-1 GIS        | Yes, this presentation will be available on the Iowa HSEMD E9-       |
| Standards Rollout presentation be sent      | 1-1 website  |
| out to everyone?                            | http://www.homelandsecurity.iowa.gov/programs/E_911.html.            |
|   | There is a NG911GIS tab at the bottom of that page. A PDF copy       |
|   | of the presentation will be sent out to all PSAPs and Iowa           |
|   | county GIS departments.  |
| Will this eventually lead to a state GIS    | This project will not lead to a position created at the State level. |
| Coordinator position?                       |  |
| What are authoritative boundaries?          | The authoritative boundary is intended to represent the              |
|   | boundary extent (city, county, region) for which the GIS data is     |
|   | provided. For example, if a city is providing their data directly,   |
|   | the authoritative boundary is a single polygon for that city         |
|   | boundary. If that city provides their data to the county, and        |
|   | thus the county is the authoritative source of data into the         |
|   | statewide layers, then the county boundary becomes the single        |
|   | polygon for the county as the authoritative source.                  |
| Can there be a difference between the       | It should be determine who the sources are for provisioning at       |
| authoritative person and the reporting      | the state level. For example, a county would take a version of       |
| person if the City if responsible for their | the city data and incorporate it into the county dataset on a        |
| data but the 911 Coordinator submits the    | periodic basis. The county would submit the data on behalf of        |
| data? Would the Cities be expecting they    | the entire county. If that is not case, that would be defined as     |
| would be reporting directly to the State or | the SIF function that overall state-level entity that would be       |
| if the 911 Coordinator would still be the   | maintaining and provisioning.  |
| reporting authority even though the City    |  |
| is responsible for their own data?          |  |
| Is there an attribute layer for township    | There were optional layers that were omitted, i.e.                   |
| boundaries?                                 | unincorporated area boundaries. At this time, it is not a            |
|   | required layer for location validation or call routing. It will not  |
|   | be provisioned up to the state.                                      |
