<u>Description of significant activities of this semi-annual term. Include comparison of actual accomplishments to the objectives identified in your application. Attach pictures and a narrative. Status changes or delays, please explain reason.</u>

Phase VI

Phase VI is complete with the contract closed out. Construction started in October 2020. This phase of the flood wall, includes the flood wall tiebacks at both the north and south ends from the riverfront west across the Burlington Shortline Railroad, including the installation of rail gate closures. Low river levels during construction season allowed for a decent pace of construction. As seen in the pictures, the permanent walls are the concrete walls that will protect to a river height of 22ft. Then aluminum panels to go on top of the wall and in the access gaps on site will allow flood protection up to a river height of 28ft. With the completion of this project, flood protection activities will start at 18.5ft. This is a two-foot river height improvement prior to the project.

MASL Sewer Separation

Sewer Separation in the Market sub-basin is nearing completion with work associated with the TIGER grant project. Completion of this work should be by July of 2023.

Construction on the Locust Basin is complete. Our overall project costs, including engineering, for this phase of the MASL project are now anticipated to be \$8.5 Million. As discussed in previous reports, our current estimates for remaining portion of the MASL Sewer Separation work are currently approximately \$90 Million for construction costs. We have been working with Iowa DNR on a potential revision to our project schedule, which may see some of the MASL work completed on a delayed schedule from what was included in our grant application. FYE Excavating began work in June 2019 on the Locust Basin portion of the MASL project, and substantial completion was completed in fall of 2021.

Private Investment

Private investment in the project area has amounted to \$18,671,989 as reported through Downtown Partners, Inc. since project inception. One major current project is the redevelopment of a building at the corner of 5th St and Valley St, which was completed in October 2020. The owners have constructed approximately 35 upper story housing units. For perspective, our downtown area currently has about 200 upper story housing units, so this represents a significant new development in our downtown area.
